

## DECLARATION OF SUITABILITY

First Degree Fitness (FDF) hereby issues this official statement regarding compliance with the UK Product Security and Telecommunications Infrastructure (PSTI) Act 2022, which came into force in April 2024.

Our AMXX fitness equipment consoles are battery-powered display units, designed solely to monitor and display rowing performance data. These consoles incorporate a Bluetooth module that operates under the FTMS (Fitness Machine Service) protocol, enabling wireless connection to compatible fitness applications on mobile devices.

In accordance with the UK PSTI requirements, we confirm the following:

### 1. No Default Passwords

The AMXX console does not implement or require any universal default passwords for Bluetooth connectivity. Pairing is handled through standardized FTMS protocol procedures without the use of preset credentials.

### 2. Vulnerability Reporting

FDF provides a public security contact point to support vulnerability disclosure. Security researchers or customers can report potential security concerns via [janice@fdflimited.com](mailto:janice@fdflimited.com).

### 3. Security Update Policy

The Bluetooth module firmware used in AMXX consoles will receive security-related support and updates for a minimum period of **1 year** from the product's market release date.

Based on the above, we confirm that our AMXX console products comply with the mandatory security requirements set forth under the UK PSTI 2024 legislation.
